Tip Calculator Working

Adapt the XML:
- Add in ids to all of the widgets that need to change.
- Add onClicks to all of the buttons.

Go to the java file.
- <mark>Do NOT delete it.</mark>

Add in methods for each of your onclicks.
For example:

```java
public void ok (View view){
}
```

Code the methods.
Get the bill amount.

```java
EditText bill = (EditText) findViewById(R.id.bill);

int userage = Integer.parseInt(bill.getText().toString());

bill.setText("");
```

Calculate the new tip and total.
Display them on the screen.

```java
TextView tip = (TextView) findViewById(R.id.tip);

tip.setText("____");
```
