

Making Animated Gifs Stop Flashing

For an extra feature, many people add animated gifs to their code. This isn't about how to do that. Google it and use the resources given.

Instead, this shows how to stop them flashing when they are loaded:

```
public void opening ()
{ //opening screen, shows gif
  card1 = new Panel ();
  JButton next = new JButton (createImageIcon ("startScreen.gif"));

  //this stoped the gifs from flashing
  next.setDoubleBuffered (true);

  next.setActionCommand ("5");
  next.addActionListener (this);
  showStatus ("Click to Start!");
  card1.add (next);
  p_card.add ("1", card1);
}
```
