

Square

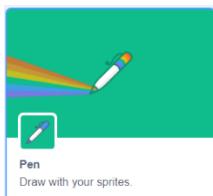

Problem Description

- Make a square that is 100 units long on the screen.

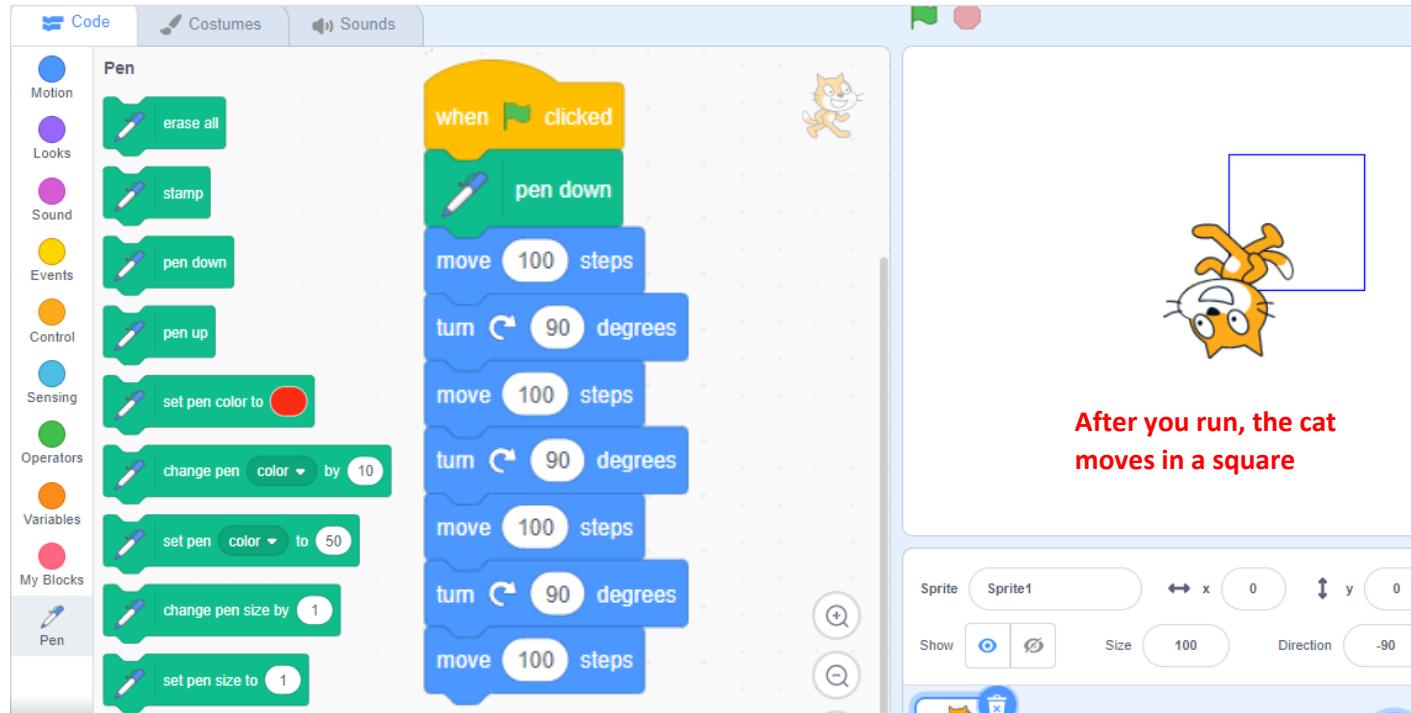

Go to the corner to add an extension.

Add the Pen extension.

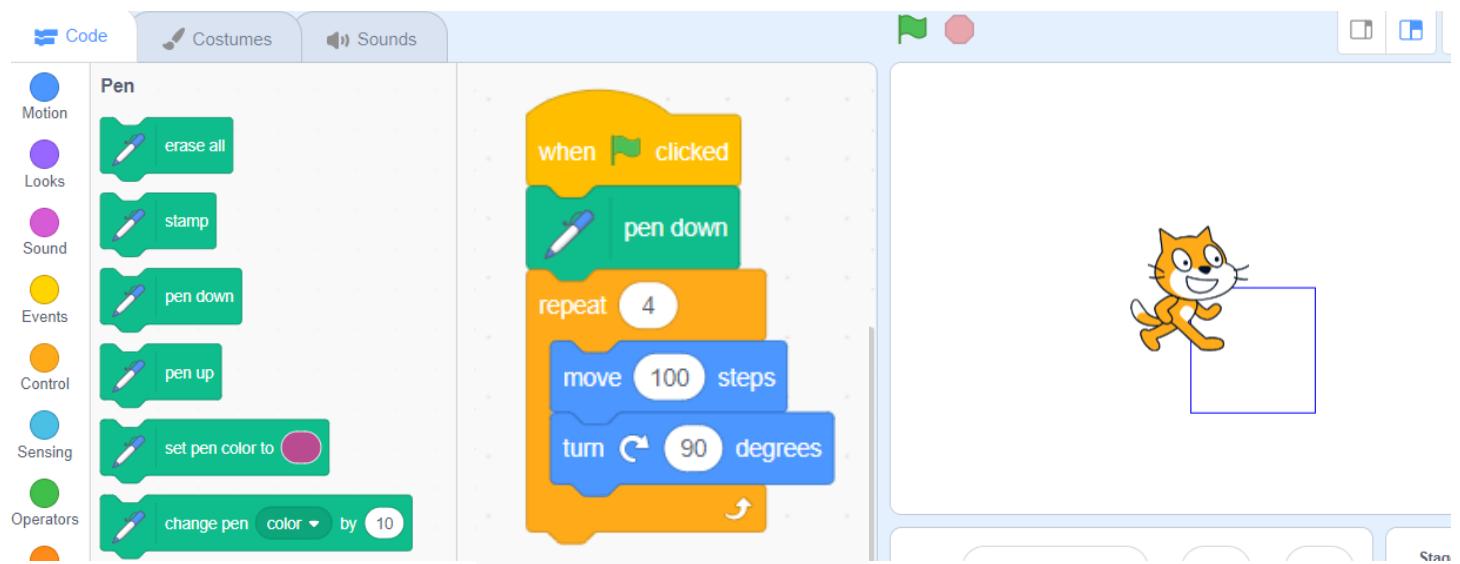

Draw the square on the screen:

After you run, the cat moves in a square

This code is more efficient, it uses a loop to repeat the steps four times.

When you are done, take a screen snapshot and add it to your scratch code.

Make sure that your picture shows all of the code, and the square that the cat drew.
