

Spheros Making Shapes

Using the movement and angle option.

MTH1W – Day 2, Part D

MTH1W Curriculum Covered in This Lesson:

- C2.1a [Coding] Use coding to demonstrate understanding of **variables**
- C2.1b [Coding] Use coding to demonstrate understanding of **parameters**
- C2.1c [Coding] Use coding to demonstrate understanding of **equations**
- C2.1d [Coding] Use coding to demonstrate understanding of **inequalities**

- C2.2a [Coding] Create code by decomposing situations into computational steps in order to **represent mathematical concepts and relationships**
- C2.2b [Coding] Create code by decomposing situations into computational steps in order to **solve problems**

- C2.3a [Coding] **Read code to predict** its outcome
- C2.3b [Coding] **Alter code** to adjust **constraints, parameters** to represent a similar or new mathematical situation
- C2.3c [Coding] **Alter code** to adjust **outcomes** to represent a similar or new mathematical situation

Sequencing and Timing:

- On Day 1, students will cover part A, Part B and some of Part C (this lesson).
- On Day 2, students finish Part C (this lesson) and cover Part D.

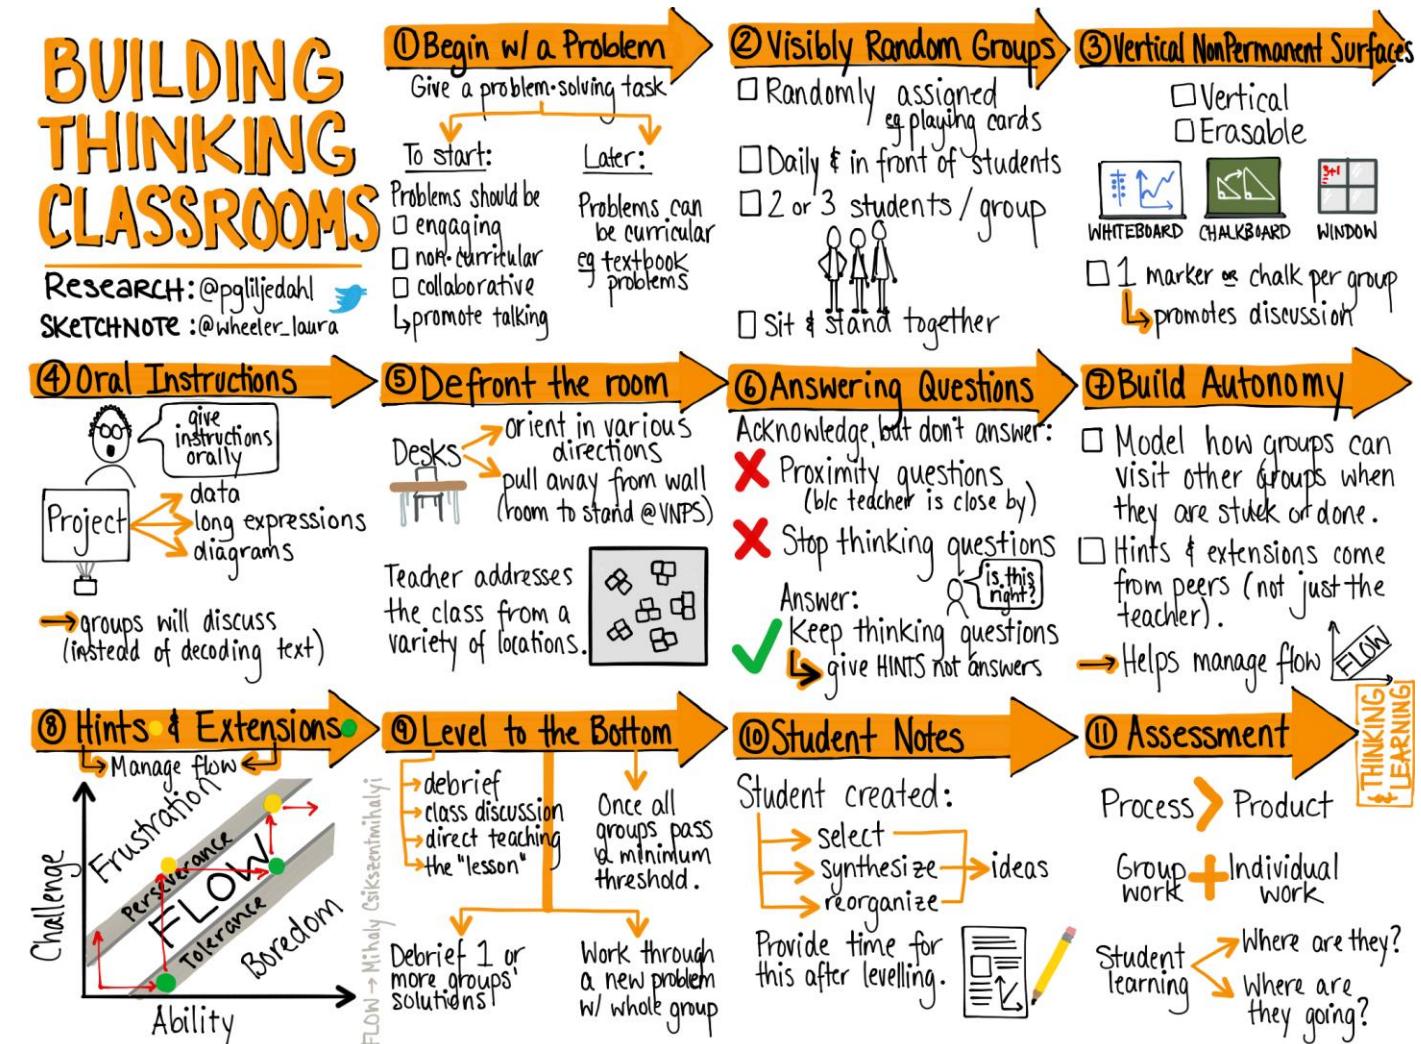

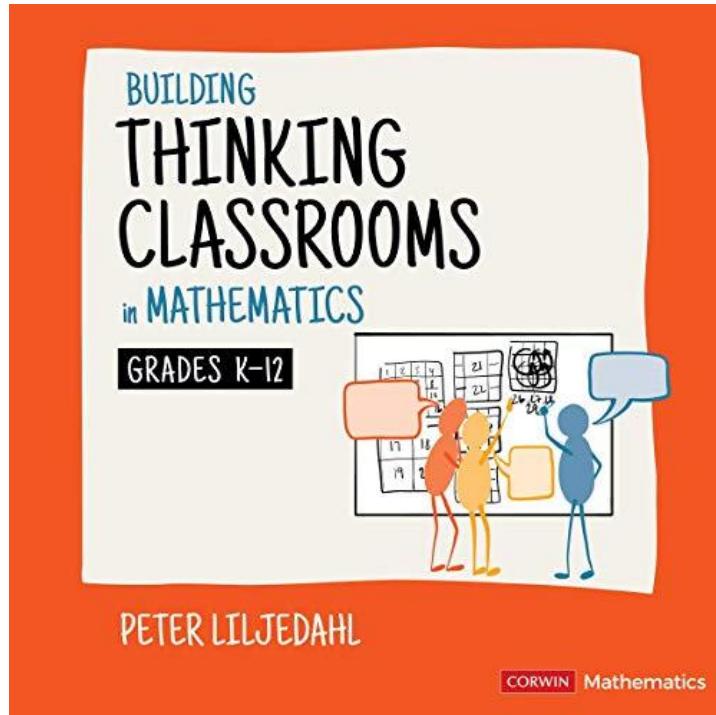

Original Curriculum Language:

C2.1 [Coding] use coding to demonstrate an understanding of algebraic concepts including variables, parameters, equations, and inequalities

C2.2 [Coding] create code by decomposing situations into computational steps in order to represent mathematical concepts and relationships, and to solve problems

C2.3 [Coding] read code to predict its outcome, and alter code to adjust constraints, parameters, and outcomes to represent a similar or new mathematical situation

This lesson is set up to follow the format of Building Thinking Classrooms by Peter Liljedahl.

Basic Coding Components

Output

Changes the robot: Moves. Spins. Re-directs to a new angle. Makes sound. Speeds up. Lights up.

Math

Calculation that results in a number: +, -, *, /, square root

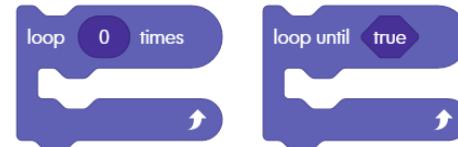

Boolean Expressions

Calculation that results in true or false: >, <, =, >=, <=, and, or, not

Control

Ifs *Decides which piece of code to run:* Uses a Boolean expression and output or math.

Loops *Repeats code:* Uses a Boolean expression and output or math.

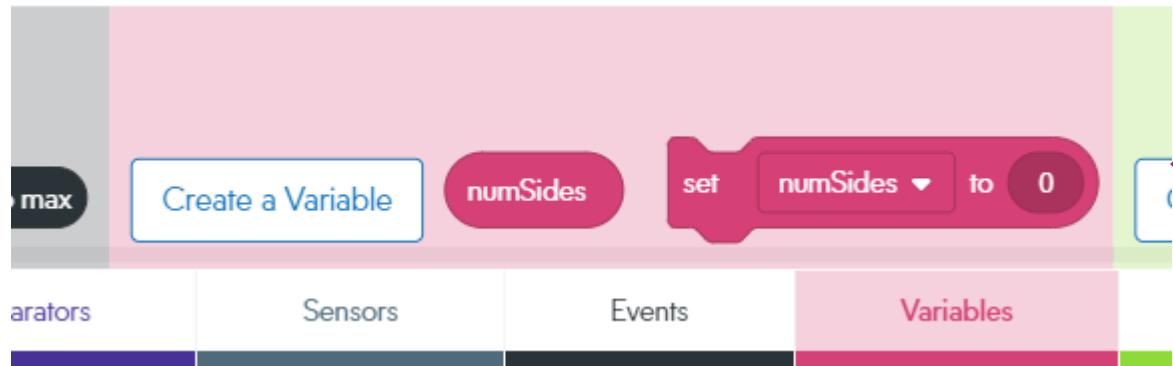

Variables

Named pieces of memory where you can store things to use later OR to store calculation results.

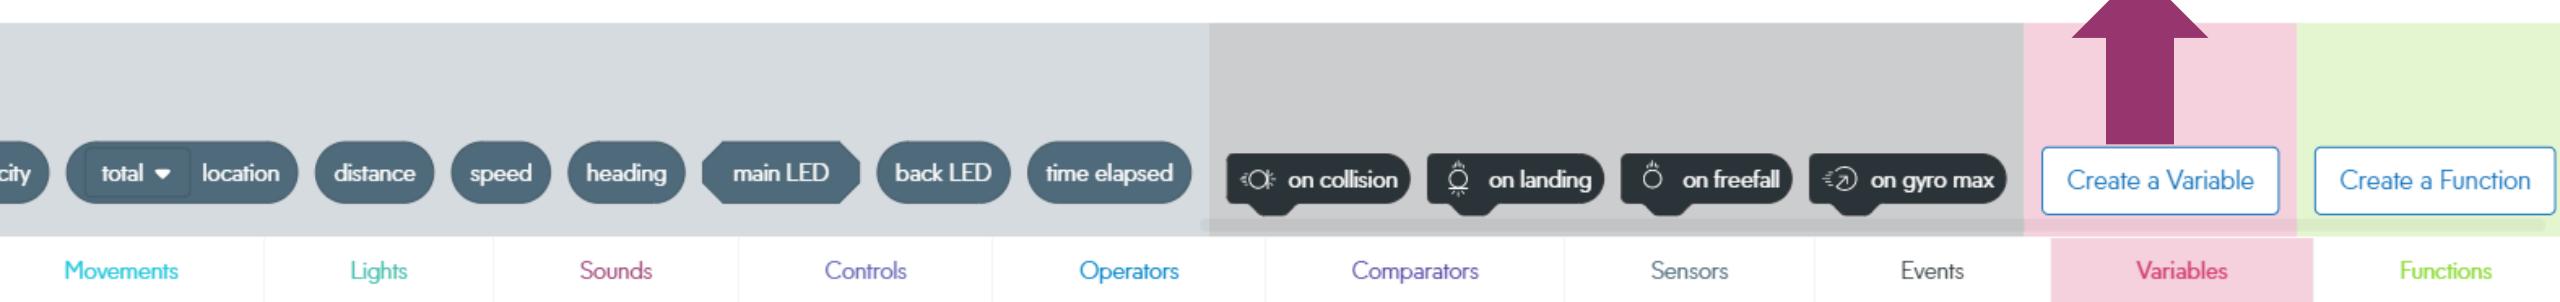

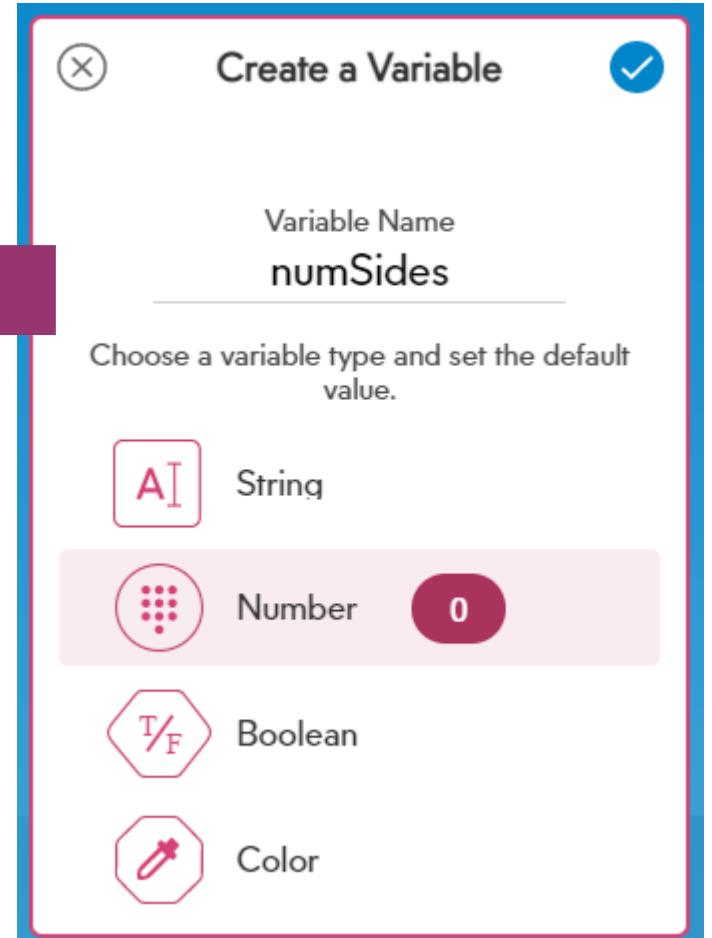

Functions

Named pieces of code where you can group code together to use it later.

What is the name of this variable? What is its initial value?

The Roll Block:

roll **angle** at 30 speed for 1s

roll 180° at 30 speed for 1s

roll 270° at 30 speed for 1s

roll 45° at 30 speed for 1s

Parameters
of the roll
block:

Heading: the
angle of
travel.

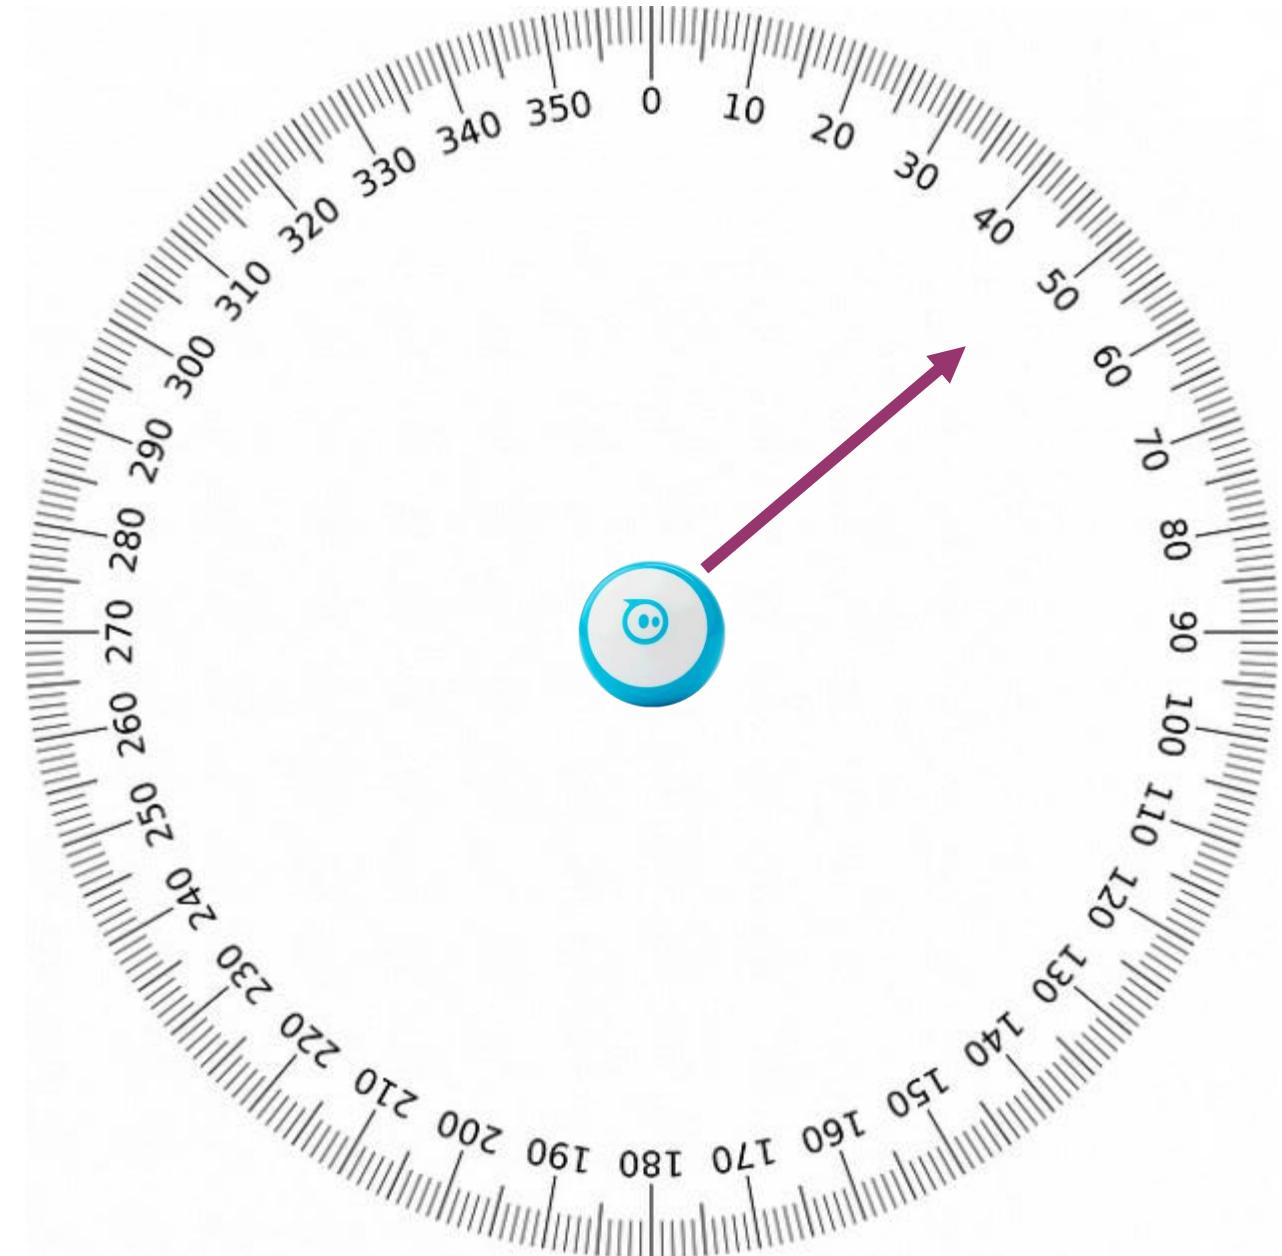

Speed:
Top speed
is 255

Time: seconds
the robot will
roll.

The Roll Block:

Another example of the roll block. What is the function name? What is the parameter name?

on start program

1 set angle to 0 ←

2 loop 4 times

3 roll angle at 30 speed for 1s

4 set angle to angle + 90

5 play button digital sound and wait

6 main LED

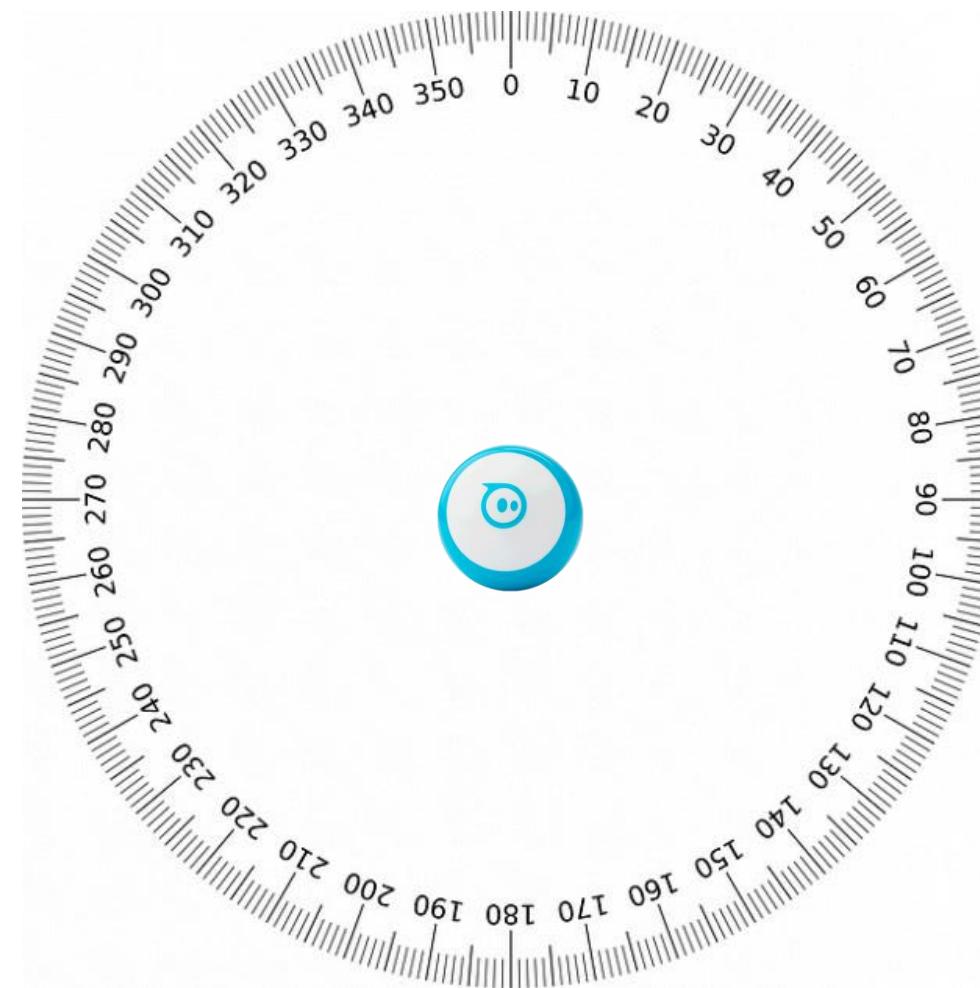

7 delay for 1s

8 main LED

variables

angle ?

Let's trace this program.
What does the first line do?

on start program

1 set angle to 0

2 loop 4 times ←

3 roll angle at 30 speed for 1s

4 set angle to angle + 90

5 play button digital sound and wait

6 main LED

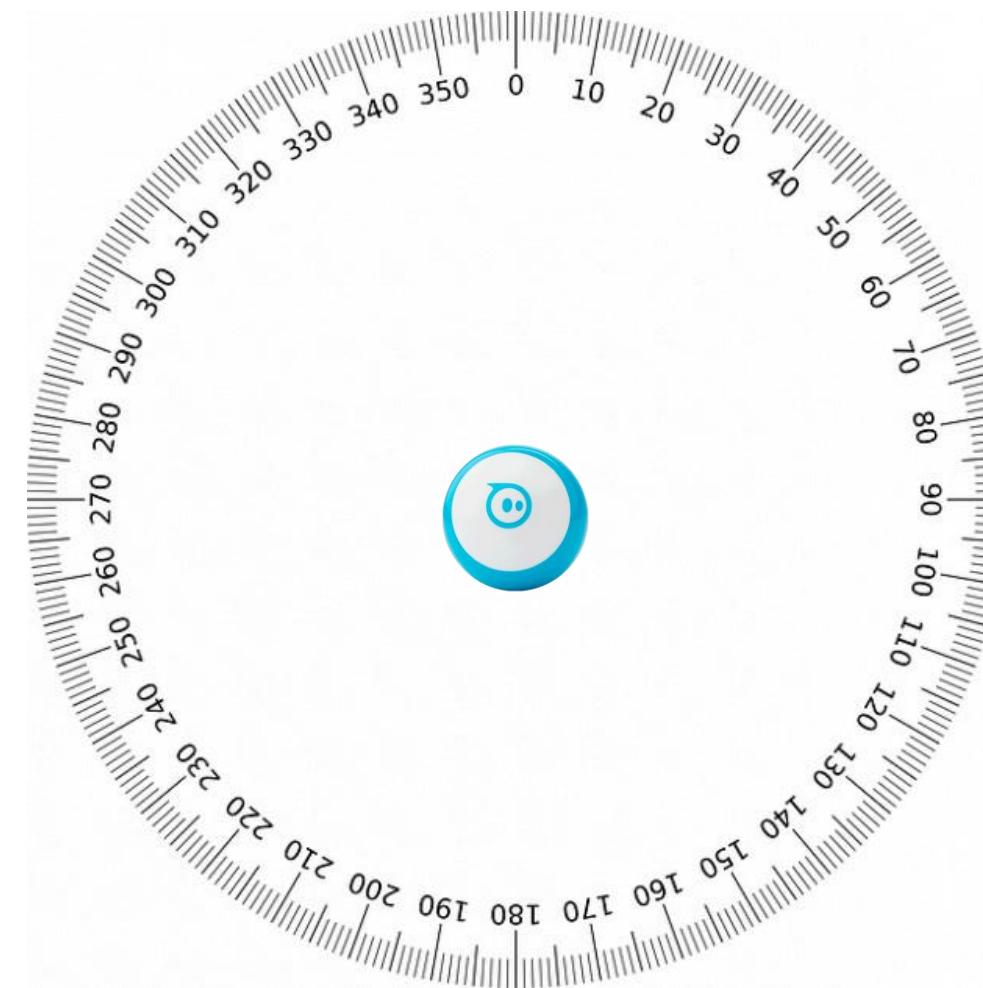

7 delay for 1s

8 main LED

variables

angle 1

Where does the loop end?
What lines of code are
repeated 4 times?

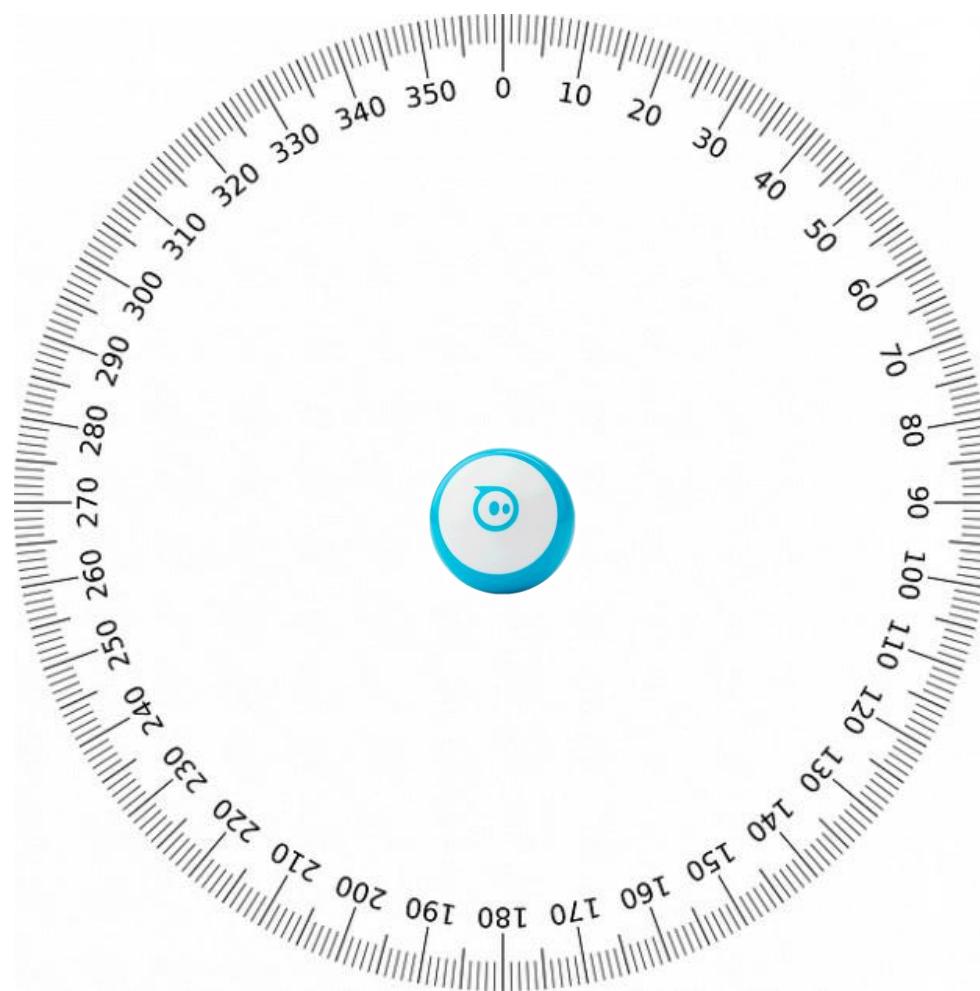

on start program

```
1 set angle ▾ to 0
2 loop 4 times
3   roll angle at 30 speed for 1s ←
4   set angle ▾ to angle + ▾ 90
5   play button digital sound and wait
6   main LED
7   delay for 1s
8   main LED
```

variables

angle 0

Does the Sphero head up,
down, right or left?

on start program

1 set angle to 0

2 loop 4 times

3 roll angle at 30 speed for 1s

4 set angle to angle + 90

5 play button digital sound and wait

6 main LED

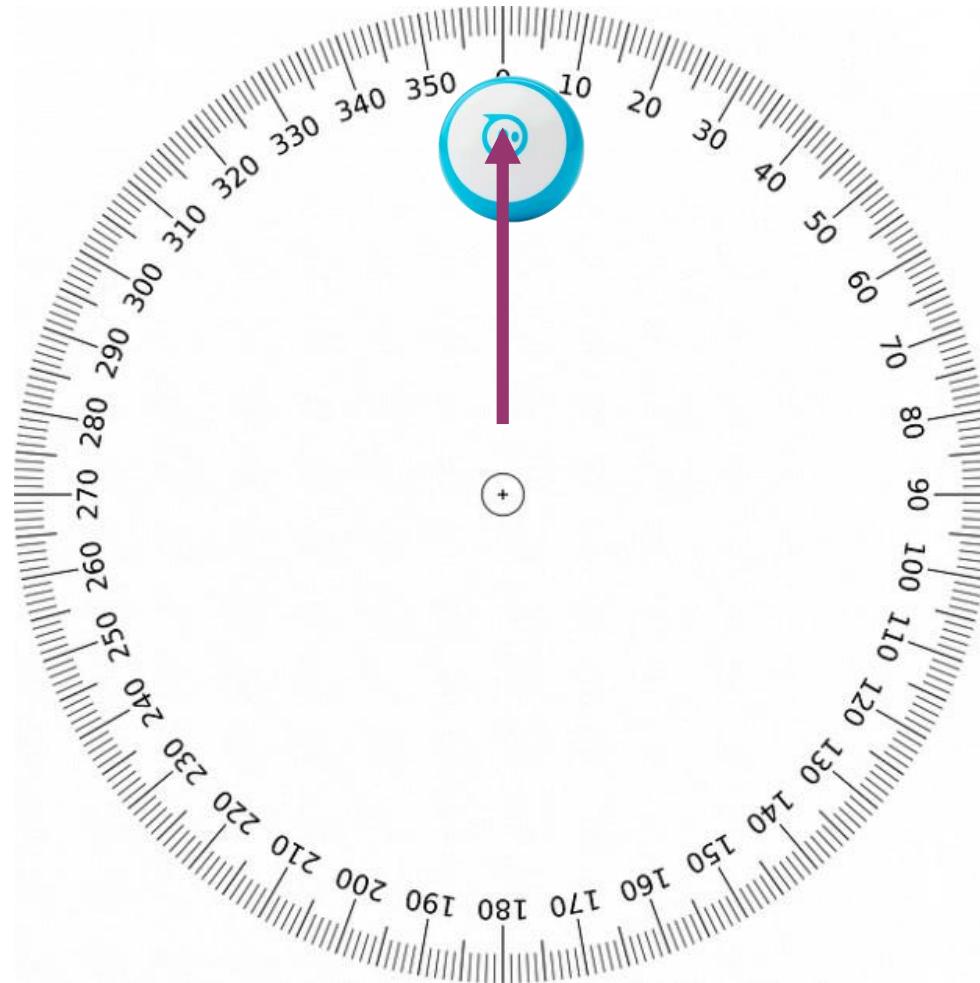

7 delay for 1s

8 main LED

variables

angle 0

What changes
after line 4 runs?

on start program

1 set angle ▾ to 0

2 loop 4 times

3 roll angle at 30 speed for 1s

4 set angle ▾ to angle + ▾ 90

5 play button digital sound and wait

6 main LED

7 delay for 1s

8 main LED

variables

angle 90

What do lines 5 to 8 do?

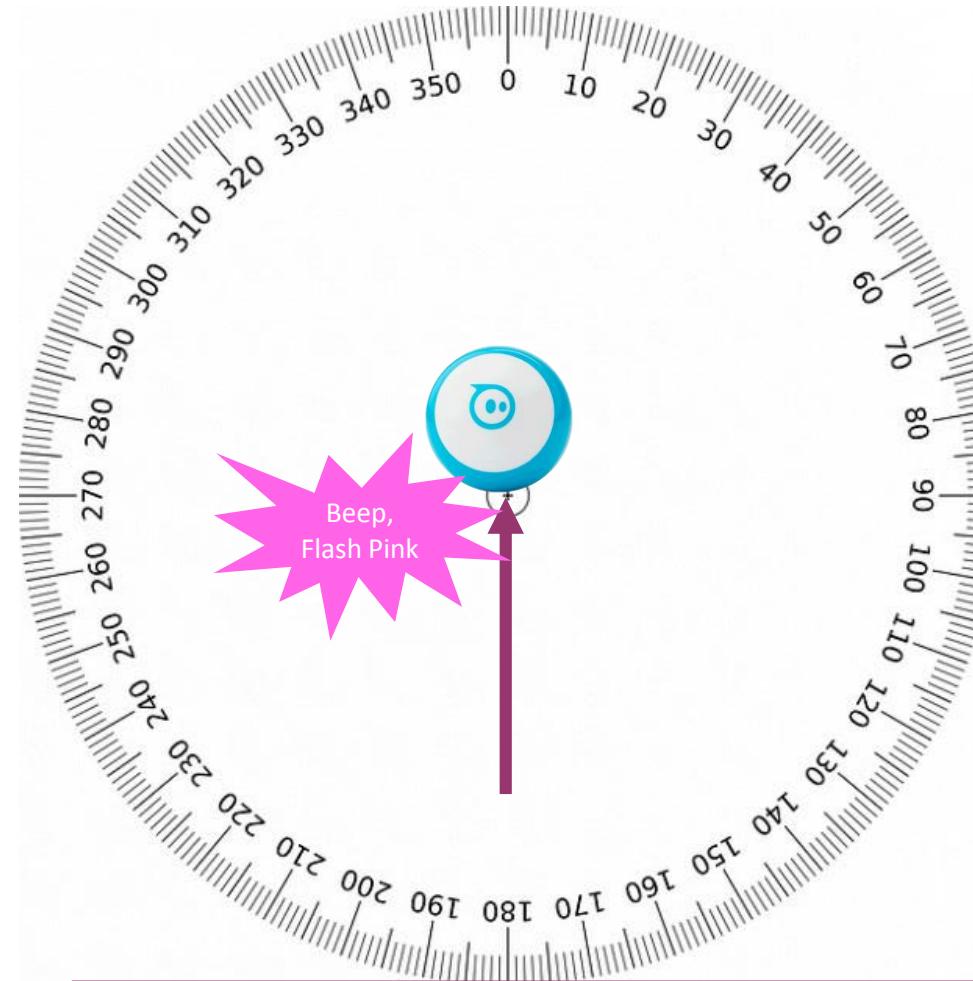

on start program

```
1 set angle ▾ to 0
2 loop 4 times
3   roll angle at 30 speed for 1s ←
4   set angle ▾ to angle + 90
5   play button digital sound and wait
6   main LED
7   delay for 1s
8   main LED
```

variables

angle 90

The second time the loop runs,
does the Sphero travel up, down,
right or left?

on start program

1 set angle ▾ to 0

2 loop 4 times

3 roll angle at 30 speed for 1s

4 set angle ▾ to angle + ▾ 90

5 play button digital sound and wait

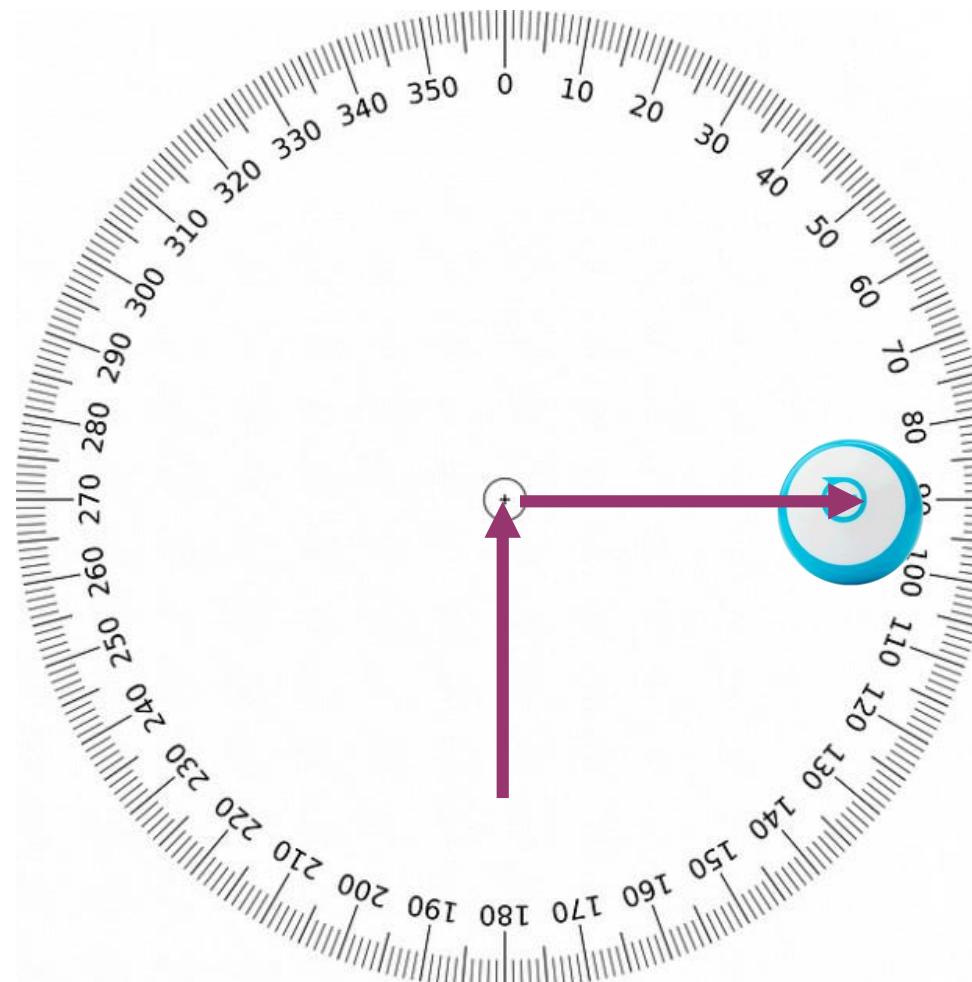

6 main LED

7 delay for 1s

8 main LED

variables

angle 90

The second time the loop runs,
what do lines 4 to 8 result in?

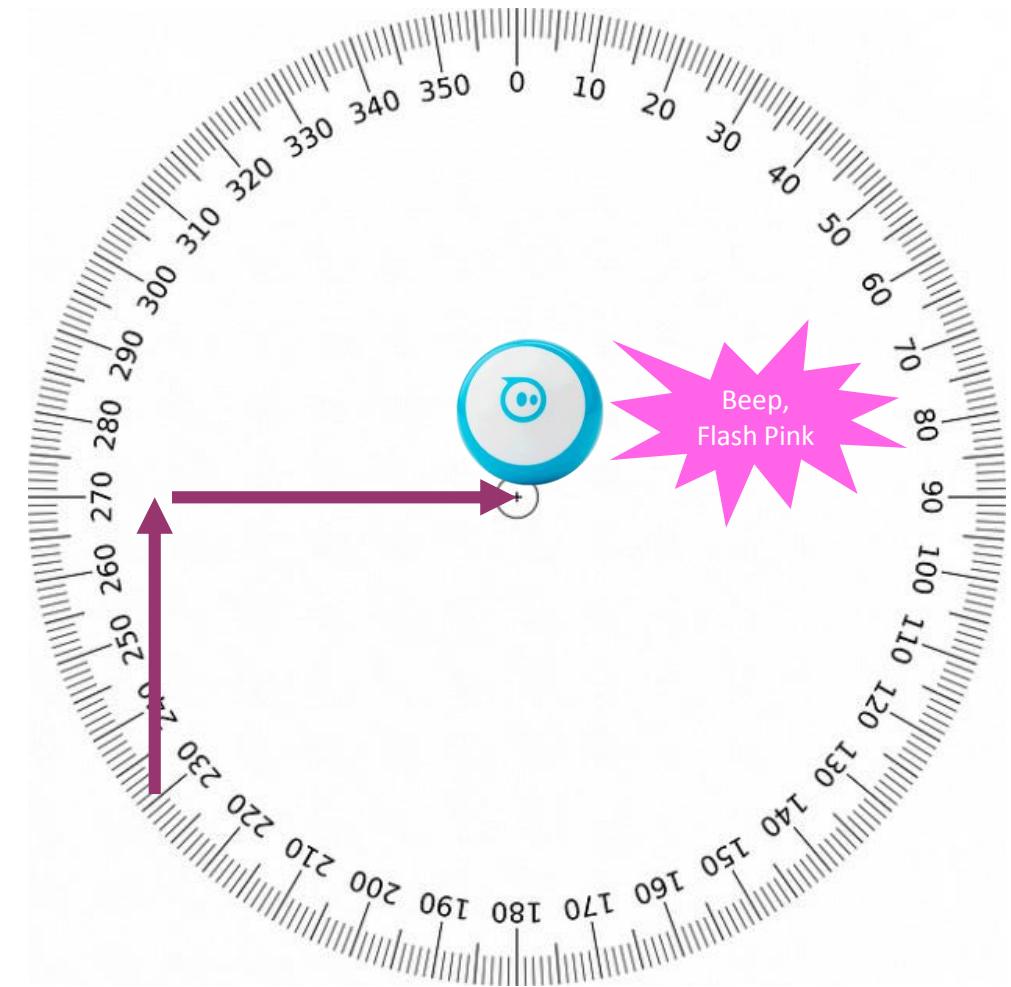

on start program

```
1 set angle ▾ to 0
2 loop 4 times
3   roll angle at 30 speed for 1s ←
4   set angle ▾ to angle + 90
5   play button digital sound and wait
6   main LED
7   delay for 1s
8   main LED
```

variables

angle 180

The third time the loop runs,
does the Sphero travel up, down,
right or left?

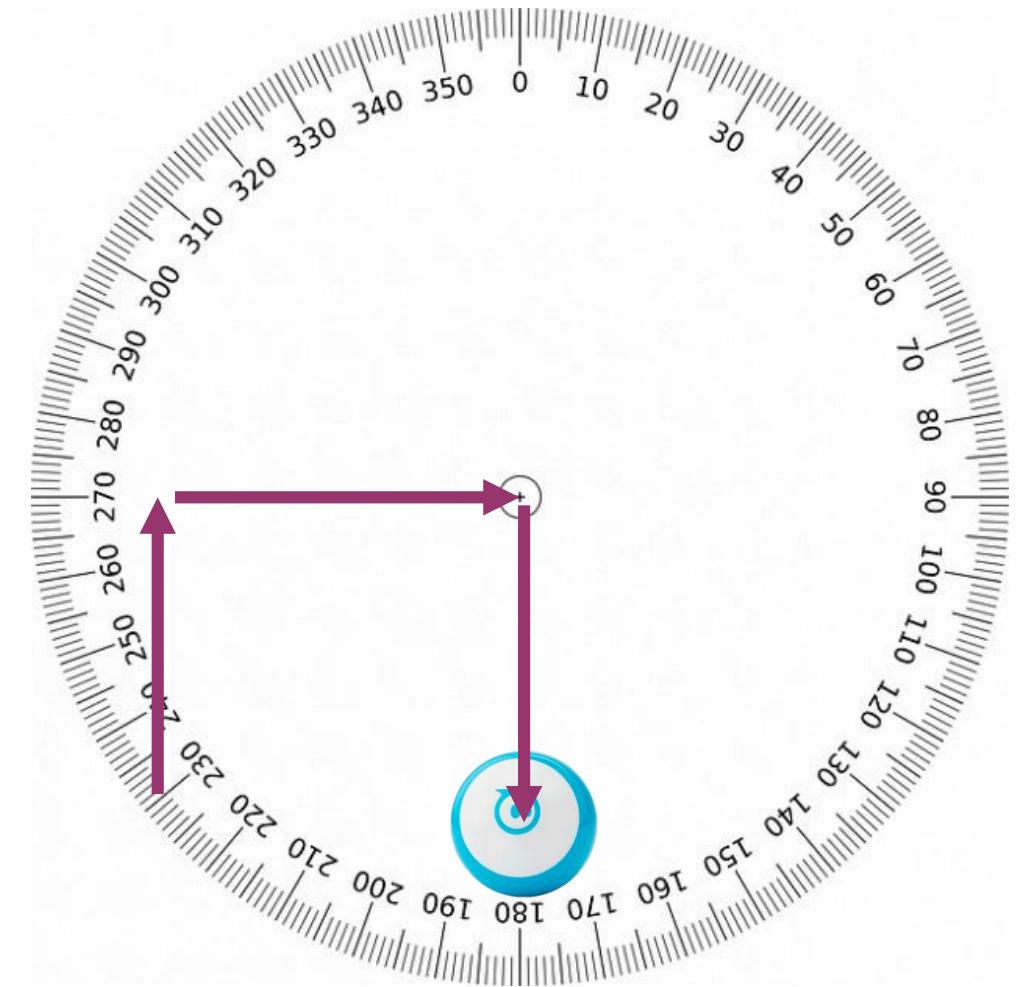

on start program

```
1 set angle ▾ to 0
2 loop 4 times
3   roll angle at 30 speed for 1s
4   set angle ▾ to angle + ▾ 90 ←
5   play button digital sound and wait ←
6   main LED ←
7   delay for 1s ←
8   main LED ←
```

variables

angle 180

The third time the loop runs,
what do lines 4-8 do?

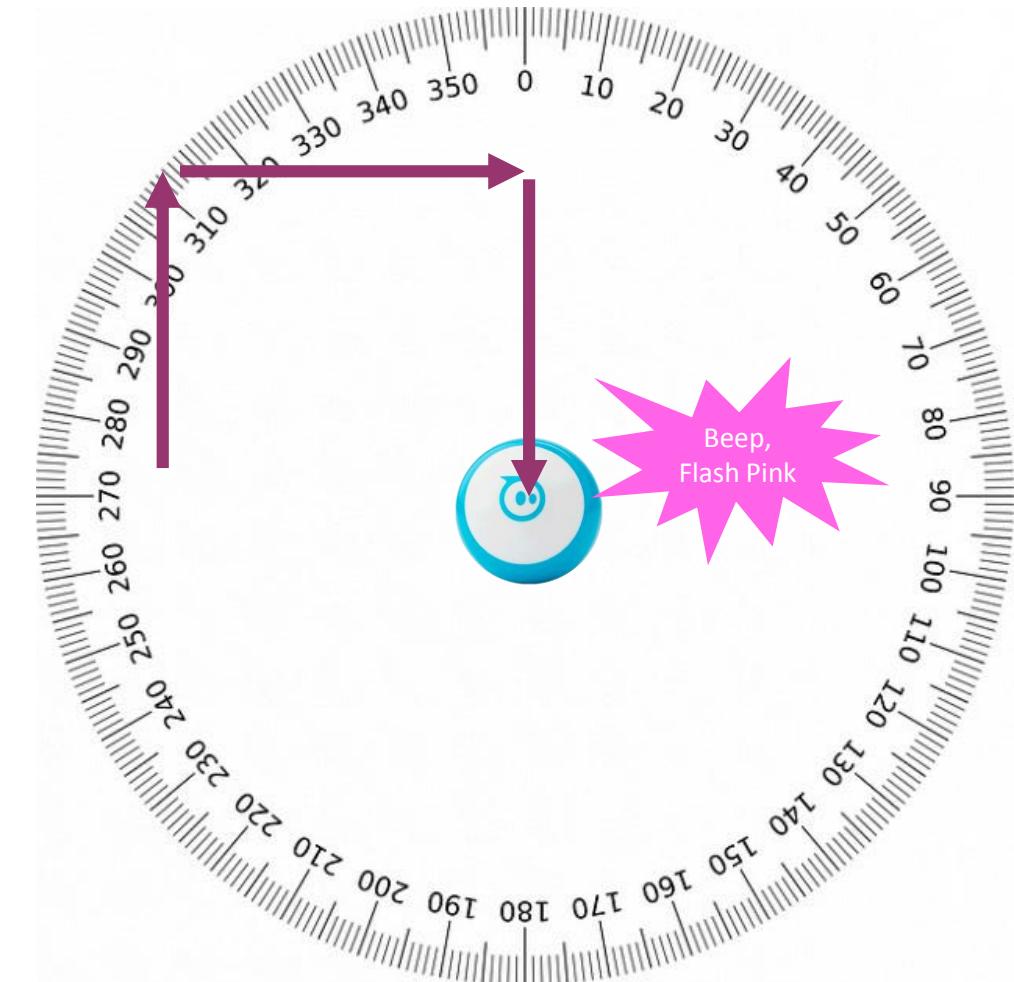

on start program

```
1 set angle ▾ to 0
2 loop 4 times
3   roll angle at 30 speed for 1s
4   set angle ▾ to angle + 90
5   play button digital sound and wait
6   main LED
7   delay for 1s
8   main LED
```

variables

angle 270

The fourth time the loop runs,
does the sphero travel up, down,
right or left?

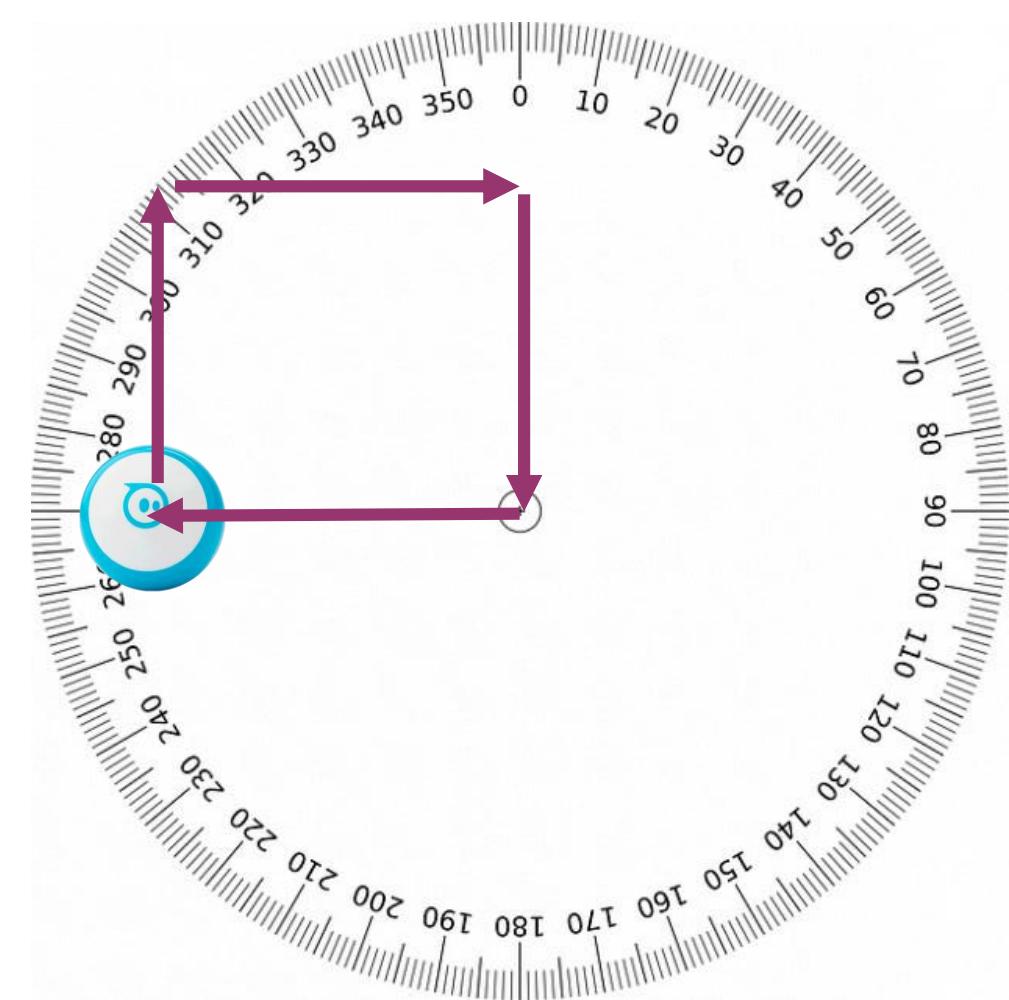

on start program

```
1 set angle ▾ to 0
2 loop (4 times)
3   roll angle at 30 speed for 1s
4   set angle ▾ to angle + 90
5   play button digital sound and wait
6   main LED
7   delay for 1s
8   main LED
```

variables

angle 270

The fourth time the loop runs,
what do lines 4-8 do?

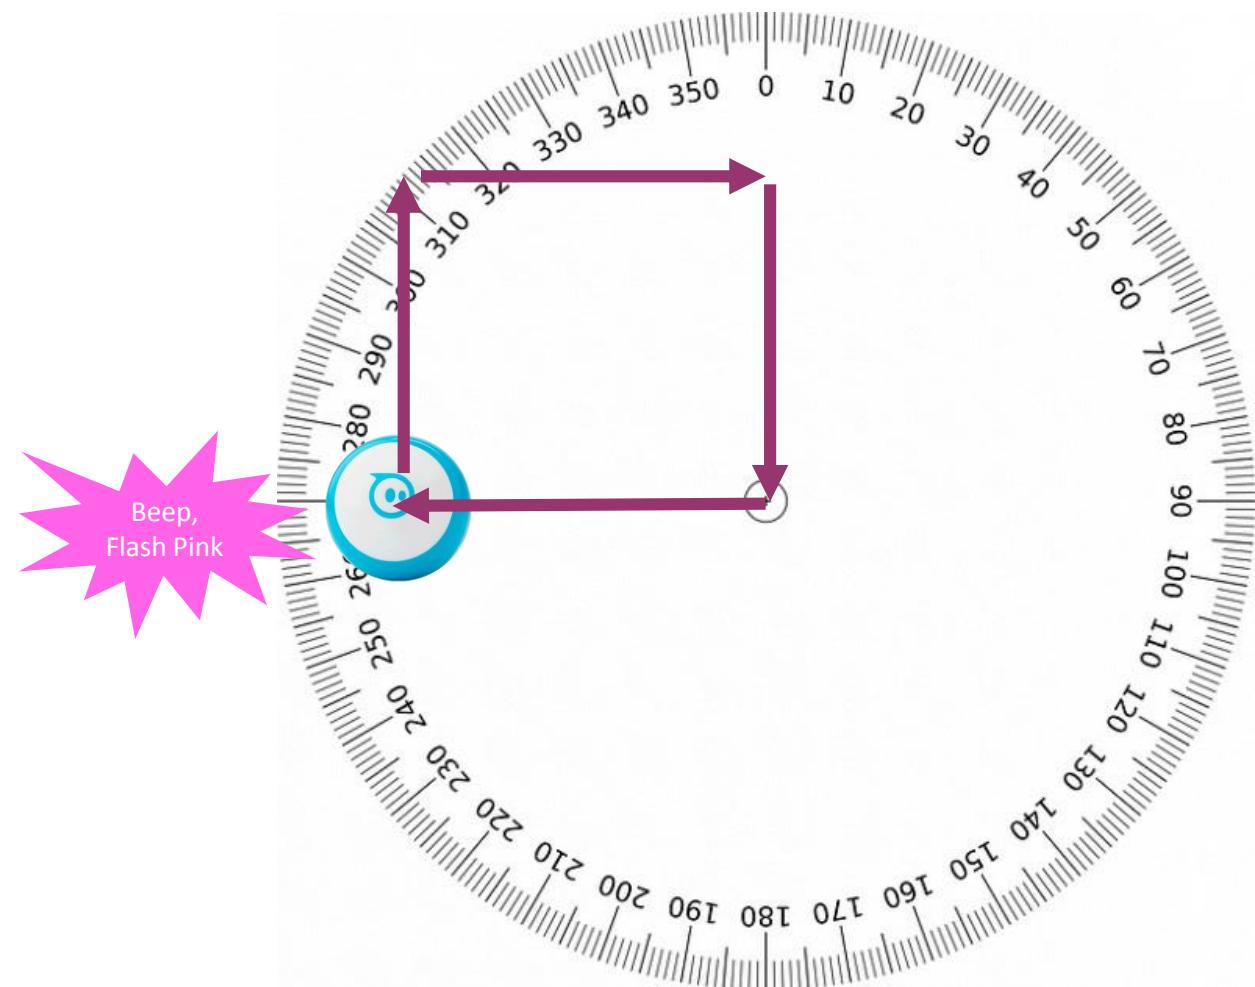

on start program

```
1 set angle ▾ to 0
2 loop 4 times
3   roll angle at 30 speed for 1s
4   set angle ▾ to angle + ▾ 90
5   play button digital sound and wait
6   main LED
7   delay for 1s
8   main LED
```

variables

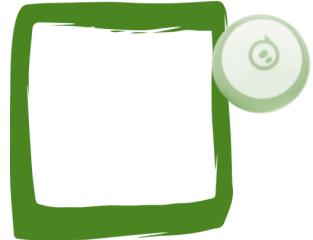

angle 360

Then, the square is complete. Beeps and flashes of light were used to signal changes of direction to the user.

Spheros & Shapes

Group Activities

We won't complete all of the following problems.

Your group will only complete one or two.

Start with Alligator. After you are done, we will discuss which one you should do next.

Problem
1

A - Alligator

B - Bat

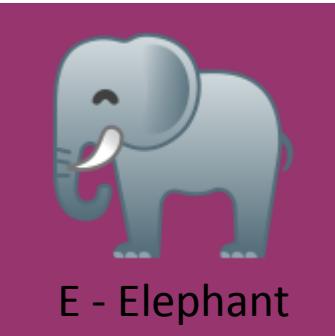

C - Cat

Problem
2

D - Dog

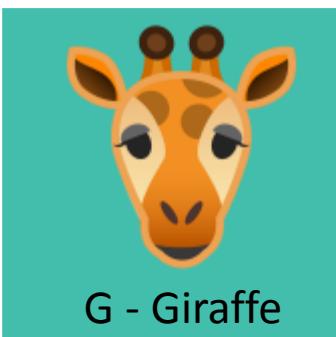

E - Elephant

F - Fish

Problem
3

G - Giraffe

H - Horse

I - Iguana

TIPS

J - Jaguar

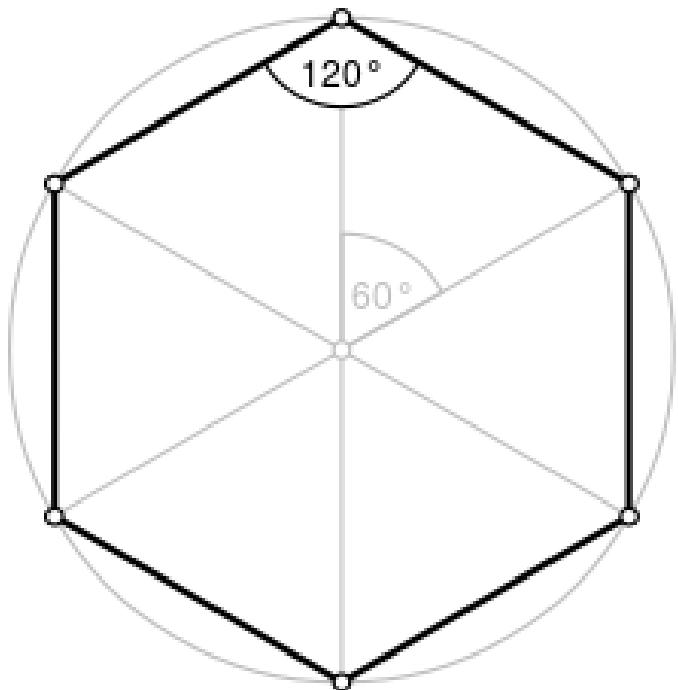

More

Practice

Adapt this code to make
a hexagon instead.

Test it on your Sphero.

```
on start program
  set angle ▾ to 0
  loop (4 times)
    roll angle at 30 speed for 1s
    set angle ▾ to angle + 90
    play button digital sound and wait
    main LED
    delay for 1s
    main LED
end
```

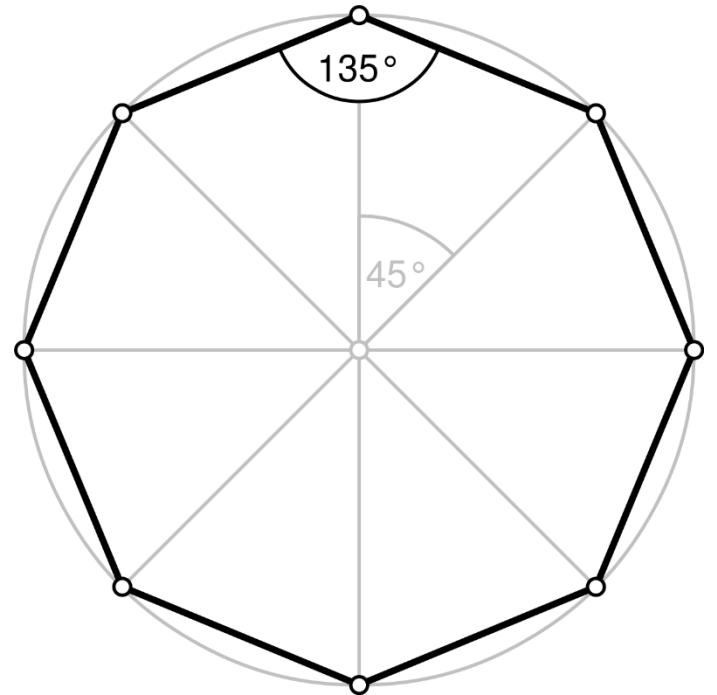

B - Bat

Adapt this code to make an octagon instead.

Test it on your Sphero.

```
on start program
  set angle ▾ to 0
  loop 4 times
    roll angle at 30 speed for 1s
    set angle ▾ to angle + 90
    play button digital sound and wait
    main LED
    delay for 1s
    main LED
  end
```

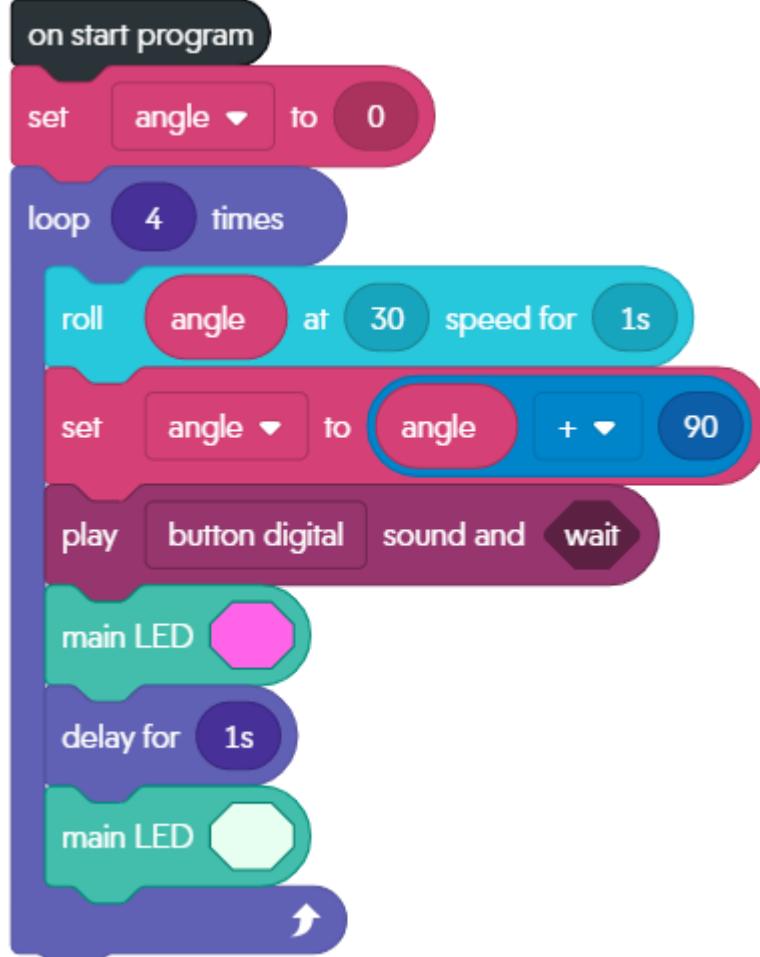

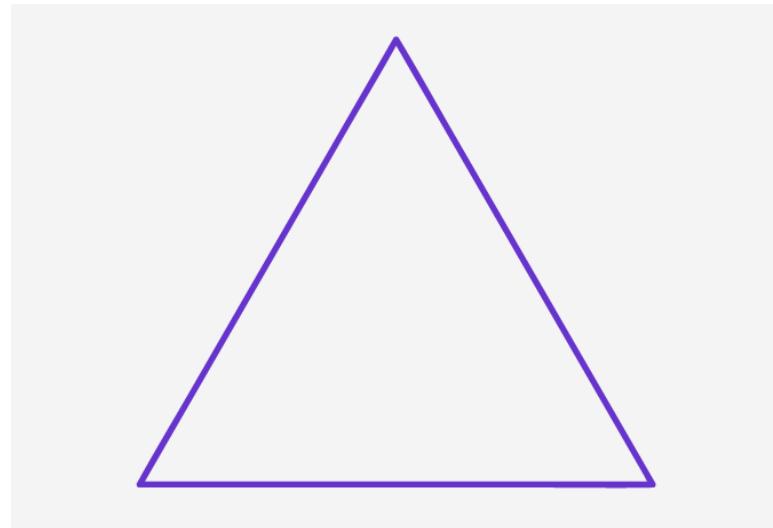

C - Cat

Adapt this code to make an equilateral triangle instead.

Test it on your Sphero.

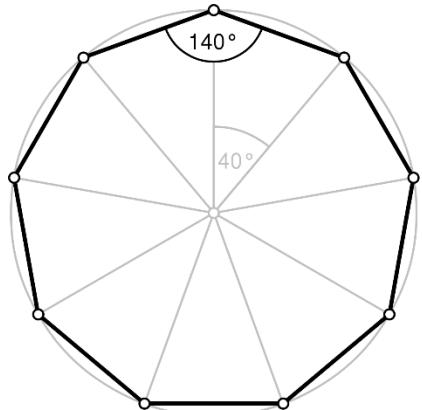

A Scratch script consisting of the following blocks:

- on start program
- set angle to 0
- loop (4 times)
 - roll angle at 30 speed for 1s
 - set angle to (angle + 90)
 - play button digital sound and wait
 - main LED
 - delay for 1s
 - main LED

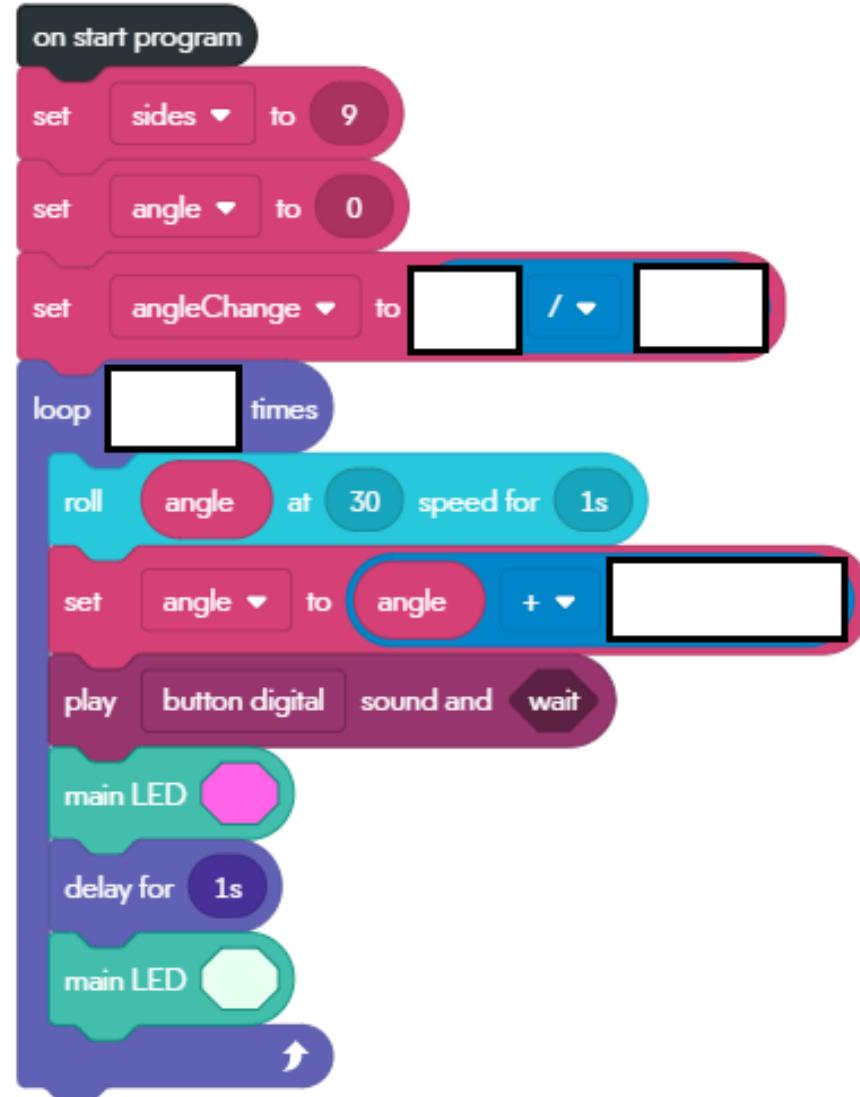

D - Dog

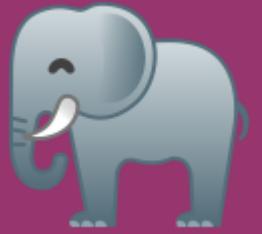

This program uses variables to make a nonagon (9 sided). If done correctly, once you have finished it, you will only need to change line 1 to be able to make any shape you would like.

Test it on your Sphero.

```
on start [program]
  set [sides v] to [9]
  set [angle v] to [0]
  set [angleChange v] to [180 / 9]
  loop [9 times]
    roll [angle] at [30] speed for [1s]
    set [angle v] to [angle + angleChange]
    play [button digital] sound [beep 1] for [1s]
    main LED [red v]
    delay for [1s]
    main LED [green v]
  end
end
```

E - Elephant

Adapt this code to
draw 3 squares.

Test it on your
Sphero.

```
on start [ ]\n  set [angle v] to [0]\n  loop (4 times)\n    [roll [angle] at [30] speed for [1s]]\n    [set [angle v] to [angle + 90]]\n    [play [button digital] sound and [wait]]\n    [main LED [red v]]\n    [delay for [1s]]\n    [main LED [green v]]\n  end
```

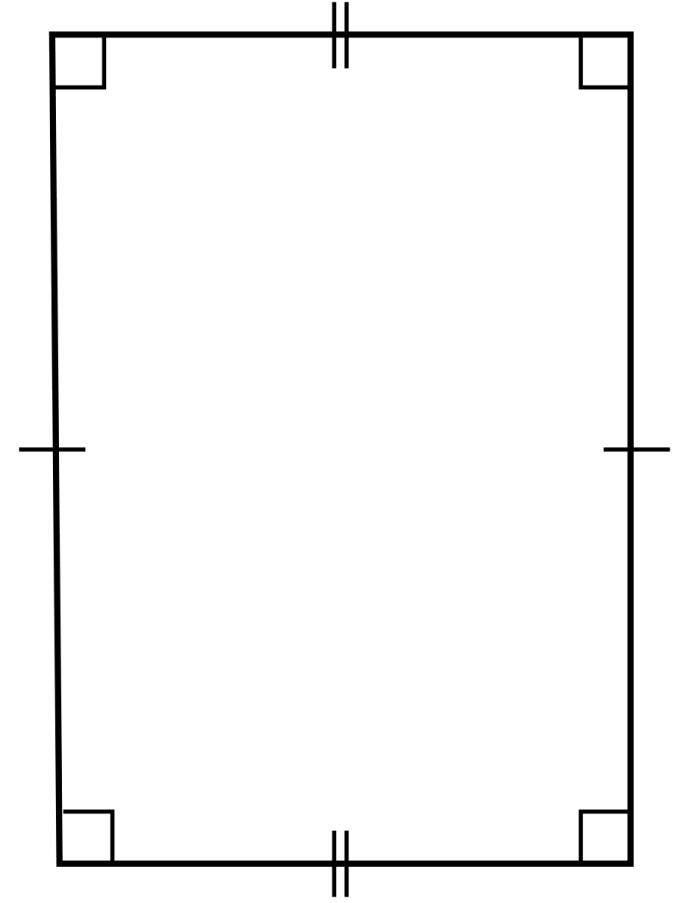

F - Fish

Write code that uses a loop to make a rectangle. There should be two different side lengths.

Test it on your Sphero.

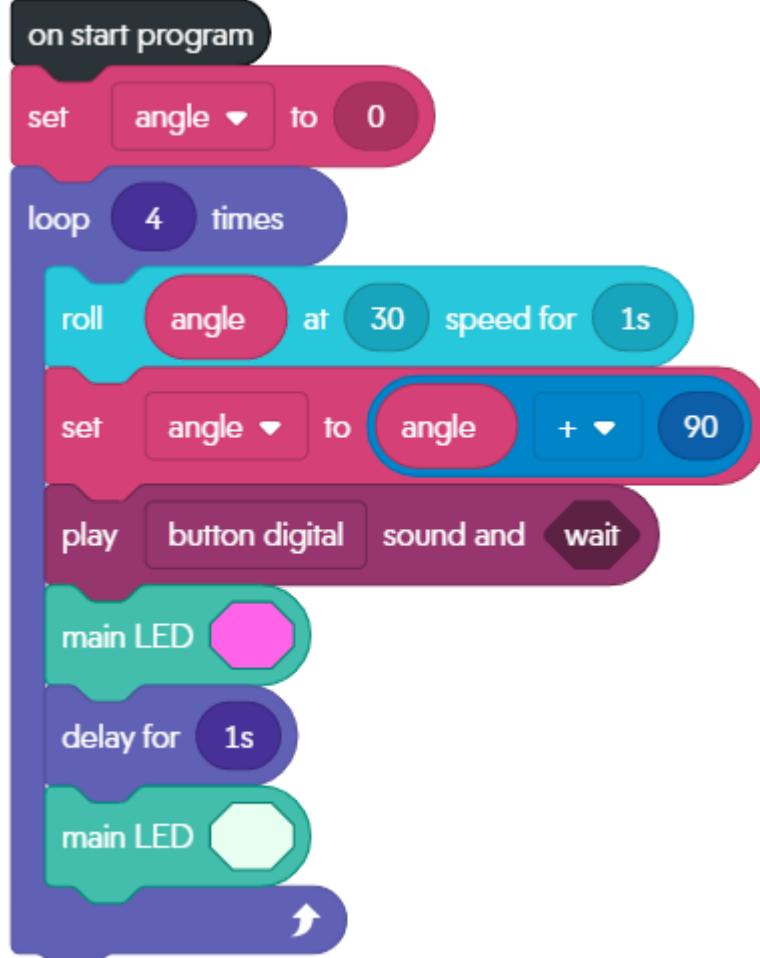

G - Giraffe

Write code that adds a variable to increase or decrease the size of the square.

Test it on your Sphero.

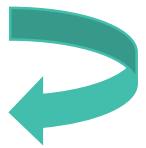

A Scratch script titled "on start program" consisting of the following blocks:

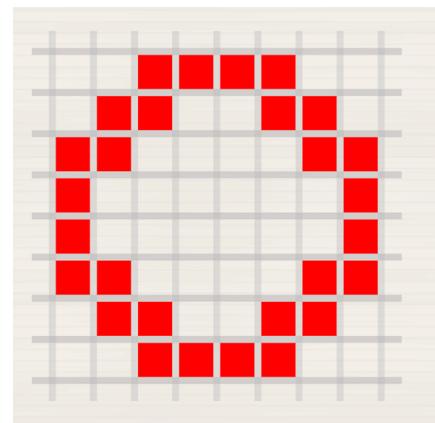

- set angle to 0
- loop (4 times)
 - roll angle at 30 speed for 1s
 - set angle to (angle + 90)
 - play button digital sound and wait
 - main LED
 - delay for 1s
 - main LED

H - Horse

Adapt this code to draw something that looks like a circle (humans are easily fooled). Take out the sounds and lights.

```
on start [ ]\n  set [angle v] to [0]\n  loop (4 times)\n    [roll [angle v] at [30 v] speed for [1 s v]]\n    [set [angle v] to [angle v + 90 v]]\n  play [button digital v] sound [beep v] wait [1 s v]\n  main LED [red v]\n  delay for [1 s v]\n  main LED [off v]\nend
```

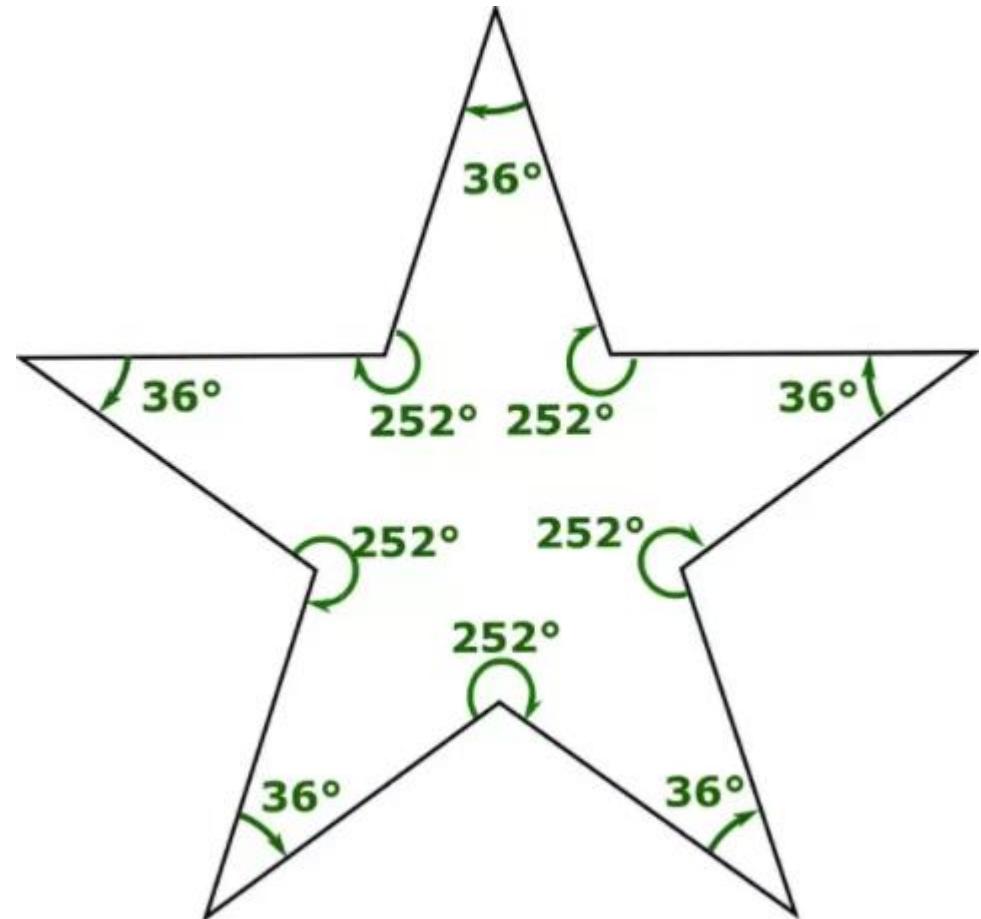

I - Iguana

Write a program that would use a loop to draw a star.

Test it on your Sphero.

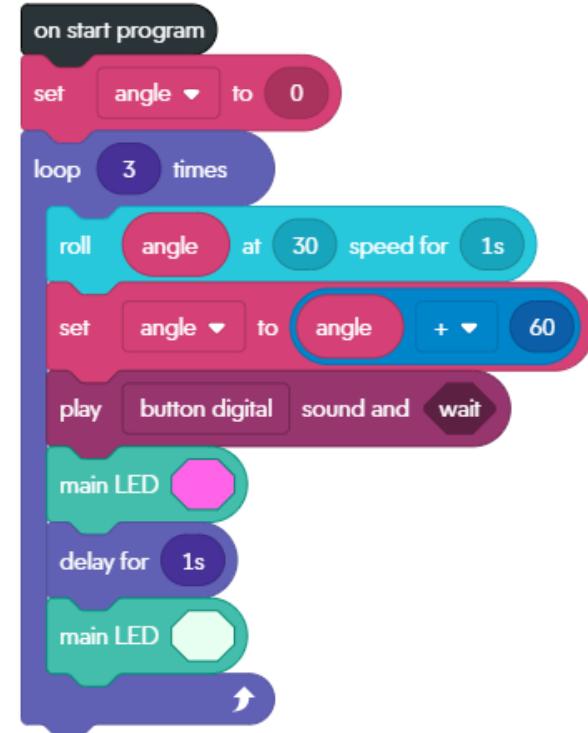

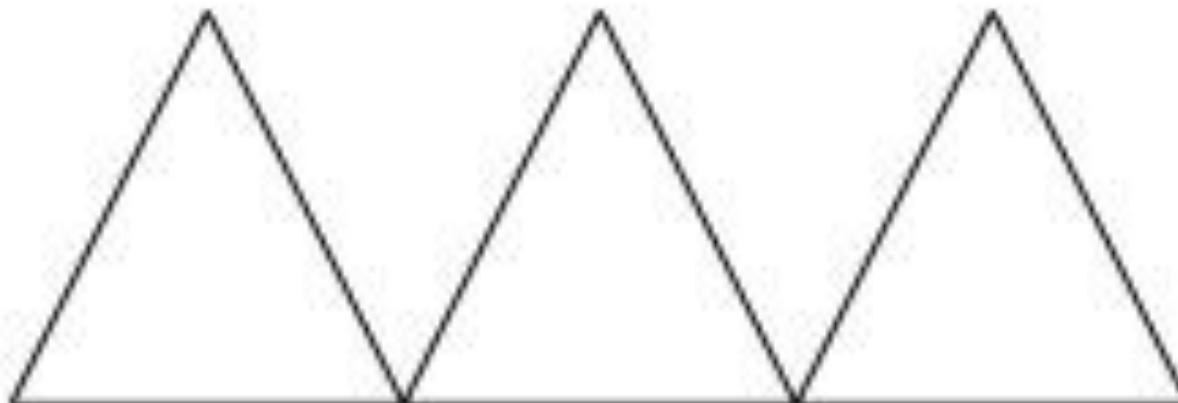

TIPS

J - Jaguar

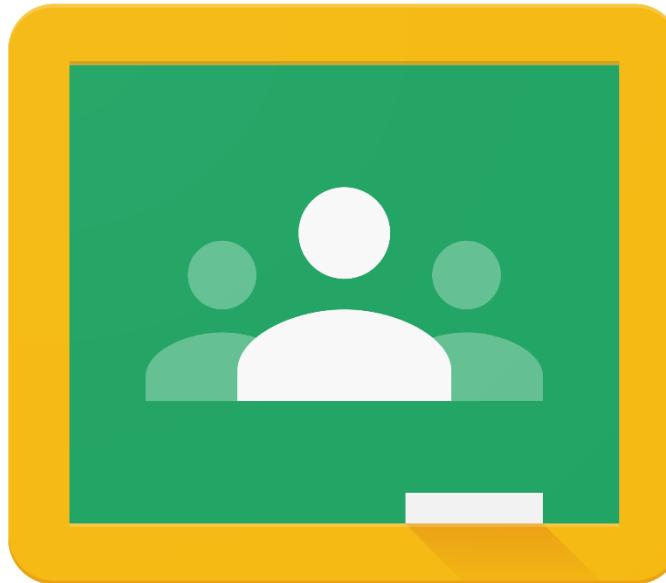

Write a program that draws three triangles in a row.

A Scratch script consisting of the following blocks:

- on start program
- set angle to 0
- loop (3 times)
 - roll angle at 30 speed for 1s
 - set angle to (angle + 60)
 - play button digital sound and wait
- main LED
- delay for 1s
- main LED

When you are done,
there are check-your-
understanding
questions on Google
Classroom.

Google Classroom
